

Assignment

Instructions

In this assignment you will upgrade your Labs 1-6.

Objectives and Outcomes

Continue using the Lab 6, at the end of this assignment you will be able to:

- Create the feedback feature to every orchid. Members who logged in can send their feedback to orchids. Only one comment on an orchid.
- Implement the search function by orchid name and filter by category.
- Manage the orchids by admin role.

Assignment Requirements

Task 1

In this task you will implement the public routes which all the users can access, including:

- The index route that shows all of orchids.
- The detailed route will display all the orchid's information.
- Members can search by orchid name.
- Members can filter by category name
- Members can login by his/her Google account.
- A member can edit his/her information after logging in successfully.
- A member can manage his/her feedback and rating a orchid once.
- Outstanding design for the true values of the orchid.

Task 2

In this task you will update all the routes to ensure that only the Admin can perform GET, POST, PUT and DELETE operations. Update the code for all the routers to support this. These operations should be supported for the following endpoints:

- GET, POST, PUT and DELETE operations on /categories and /categories/:categoryId
- GET, POST, PUT and DELETE operations on /orchids and /orchids/:orchidId

Task 3

In this task you will implement the feedback feature that includes the posting comment and rating function. Only members can feedback. Each member can only feedback one orchid once.

The data for feedback feature like below:

```
{
  'id': '1',
  'orchidName': 'Banana',
  ...
  'feedback': [
    {
      "rating": 5,
      "comment": "Awesome orchid!!!",
      "author": "Hacker-Lo@gmail.com",
      "date": "2024-10-16T17:57:28.556094Z"
    },
    {
      "rating": 2,
      "comment": "No comment",
      "author": "master-of-Hacker-Lo@gmail.com",
      "date": "2024-11-16T17:57:28.556094Z"
    }
  ]
}
```
